

ABINASH NATH PANDEY

Computer Engineer

+977-9843818328 @abinashnathpandey@gmail.com Kathmandu, Nepal in LinkedIn GitHub Portfolio

SUMMARY

Recent Computer Engineering graduate from Kathmandu Engineering College (KEC) with a solid foundation in computer science. Full-stack developer experienced in the MERN (MongoDB, Express.js, React.js, Node.js) stack and Laravel, with knowledge of MySQL and MongoDB. Skilled in building responsive, scalable applications and collaborating through Git/GitHub. Currently learning Python, Django, and machine learning to broaden my skill set. I am seeking an opportunity to apply my abilities and contribute to a growing team.

SKILLS

Programming Languages: JavaScript, PHP, Python, C, C++
Web Technologies: Express-JS, React-JS, Node-JS, Laravel, HTML-5, CSS-3, Tailwind CSS
Database: MongoDB, MySQL
DevOps & Tools: Git, GitHub, Netlify, Vercel, GitHub Pages
Data Science: NumPy, Pandas, Jupyter, Matplotlib, OpenCV, MediaPipe, TensorFlow
Software & OS: Windows (7/10/11), Office 365 (Excel, Words, Teams, etc.)

EDUCATION

BE in Computer Engineering **Graduated – 2025**
Kathmandu Engineering College

EXPERIENCE

Junior Software Developer Entry Level **April 2026 – Present**
Focused on Development and AI/ML (Onsite)

- I made full-stack applications that can handle lots of users and data. I made sure they work well with other systems, databases and the whole computer system.
- I worked with people from teams using tools like Git. We checked each other code using special pipelines like CI/CD to make sure that the software is good and followed a way of working called Agile to make software that people can rely on.
- I made applications that use intelligence like the kind that can understand language and I used special tools, like Vector Database and workflow automation to make business work better.
- I looked into. Used Artificial Intelligence and Machine Learning to make real things like special computer programs that can understand human language and I made sure they work well with other systems and databases.

Laravel Developer Intern **September 2024 – December 2024**
Focused on Development (Onsite)

- Engineered and optimized data pipeline to standardize dataset over 1000 rows from multiple sources using Laravel Migration and database seeding.
- Improved backend system to automate report generation and data export, by reducing 40% across reporting all department.
- Built and maintain custom analytics dashboard to visualize key performance indicators and revenue trends, integrating data directly from MySQL using Eloquent ORM.
- Collaborate business analysts and senior management to define, validate, implement six core business KPIs, ensuring data integrity and strategic alignment of all reporting tools.

PROJECTS

Cambridge Job Portal | Laravel Framework | GitHub

- Achieved a user satisfaction by launching a responsive website for authors and job listings, by enhancing user navigation and layout.
- Increased development efficiency through the use of Laravel blade files and pagination in routing in shared hosting.
- Developed user-friendly interface with Tailwind CSS and seamless trailer playback for enhanced user engagement.

Blog-App Website | *MERN Full-Stack* | [GitHub](#)

- User can enable to create by categories, edit and delete their own blog post. Also, user can comment, like/unlike, any blogs
- Implemented user authentication and authorization with secure login/ Signup features and role-based access control.
- Designed a responsive and interactive UI using React JS and tailwind CSS, ensuring seamless user experience across devices, and integrated backend APIs for data-driven operations.

E-Commerce Website | *MERN Full-Stack* | [GitHub](#)

- Management, cart, orders, admin, user authentication and OTP verification on each mail.
- Payment gateway integration.
- Used Zod Schema, z model and other integrations.
- Used hooks and email validation with API with other responsive and backend authentication

Personal Trainer using Human Pose | *Maching Learning* | [GitHub](#)

- Enhanced real-time pose estimation system using Python, OpenCV and Mediapipe to analyse and track human body joint movement during exercise.
- Implemented an automated feedback mechanism that provides instant corrective cues for alignment and technique, improving user performance.
- Utilizing NumPy for efficient data processing and analysis of body movements, enhancing the accuracy and responsive of the tracking system.
- Revealed that 38% of churned users were on monthly contracts with less than 3-months tenure-suggested early engagement strategies.

Shikshalaya | *Mobile Application* | [GitHub](#)

- A mobile application focused on digital learning, featuring user-friendly navigation and an intuition UI for students.
- Integrated core functionalities such as course bowering, study material access, lecture notes, lecture videos for life time and user authentication to enhance the overall learning experience by digital platform.
- It is built with clean architecture and scalable components, ensuring smooth performance across devices and easy future feature expansion.

Music Text Player | *Django Framework* | [GitHub](#)

- It allows only admin to upload, manage and play music files with synchronized text/lyrics.
- Designed a clean, responsible UI and integrated backend logic with Django ORM for smooth playback experience and structure data storage.
- Implemented core features including user authentication, music file handling, text display, and efficient media management using Django's built-in tools.

CERTIFICATES

- **Code IT 2023-2024:** Node-JS, React-JS, UI/UX, Python, Django | [Link](#)
- **Sojo Job 2024:** Full Stack Development | [Link](#)
